

Edit Suite B Magni Waveform Guide

- A Program output from the Grass Valley Switcher
- B SVHS Recorder Output
- C DVC Pro Output

The TBC Controls under the waveform panel adjust the DVC Pro deck. SVHS color/white parameters are still controlled on the deck itself.

The 3rd White Monitor on top of the suite is the Magni's output.

- The dash line is 7.5. Switcher output black (the two black top lines) should rest on this.
- Blanking level (the bottom most lines) should be on -40.
- The H & V (horizontal & vertical) are used to adjust the scope accordingly.
